MEDNAX®
HEALTH SOLUTIONS PARTNER

CASE STUDY

Reduced deployment time from months to minutes

Transformed culture from **project to product mindset**

Accelerated **DevSecOps transformation and cloud adoption**

> "Our IT mission, like our company mission, is to take great care of the patient™ every day and in every way. We do this by developing solutions and technology with highly disciplined and rigorous engineering practices, processes, and solutions. Oteemo's help in developing and implementing measurable, quality-focused practices has significantly increased the pace of integration and innovation. I expect that our expanding partnership will continue to accelerate our capabilities."
>
> *Adam Martin, Senior Director Applications, Mednax*

A national medical group of more than 2,300 physicians in 39 states and Puerto Rico, Mednax is reshaping the delivery of women's and children's care. Using evidence-based tools, continuous quality initiatives, clinical research, and telehealth programs, **Mednax strives to be the leading provider of health solutions, enhancing patient outcomes with high-quality, cost-effective care.**

To accomplish this goal, Mednax has a network of highly skilled physicians and advanced practice providers. Mednax relies on those clinicians and its ability to quickly design and deploy new solutions that enable customer-facing and provider-to-provider care. This ability is delivered and supported by Mednax's Information Technology (IT) platforms.

Mednax has prioritized technology innovation for decades. Migrating legacy systems to local hospital networks more than 20 years ago, Mednax has leveraged IT to innovate and enhance their capabilities and care for much of its 40-year history. But three years ago, test automation stood in the way of achieving the speed and efficiency Mednax needed to deploy new applications. The organization required a solution to quickly, reliably test their innovations. They found Oteemo to help.

As a leader in DevSecOps transformation and cloud native application development, Oteemo is an expert in building DevSecOps teams and enabling enterprises to function more efficiently. Having worked with dozens of customers to create processes and solutions that accelerate the DevSecOps operating model and its adoption,

Oteemo helped Mednax implement the tools and processes required to release new applications reliably.

The partnership didn't stop there. Once Oteemo demonstrated its ability to deliver excellence in test automation, the team was enlisted to help Mednax improve its DevOps practices. Needing more rigor and reliability in the design, build, and integration process to deliver on its four key capabilities - digital experience, digital excellence, application delivery, and integration delivery - Mednax tapped into Oteemo's deep expertise again. After an in-depth technical discovery, Oteemo created a roadmap for Mednax to build a robust DevSecOps practice that would accelerate their cloud adoption and development lifecycle.

The first step in the process was to transform Mednax's culture from project to product, embedding agility and security throughout the operation. Once the DevSecOps practice was established with shared responsibilities, defined product owners, and a common language, Mednax was ready to move onto its priority initiative - cluster deployment automation.

Oteemo helped Mednax automate its ability to deploy the compute clusters on which they build cloud native applications, accelerating cluster deployment time from months to minutes.

The Mednax/Oteemo team is now moving onto their next digital transformation pursuits, improving Mednax's abilities to:

Develop

Deploy

Integrate reliably and securely.
